EXPERIENCE

DataAnnotation

04/2026 – Present

AI Trainer

- Evaluate and refine AI-generated code responses for technical accuracy and logical consistency, contributing to high-impact machine learning training datasets that improve large language model (LLM) alignment.
- Apply expertise in JavaScript/TypeScript, Python, and SQL to craft precise prompt-response training pairs, uphold rigorous data quality benchmarks, and drive AI model performance improvements through reinforcement learning from human feedback (RLHF) workflows.

Nodeoven

08/2025 – 11/2025

Software Engineer

- Delivered a lender's dashboard for commercial mortgage loans end-to-end: designed and prototyped the mobile app in Figma, then implemented it in React Native with TypeScript, leveraging AI-assisted design iteration for rapid prototyping.
- Transitioned the product to a scalable Progressive Web App using Next.js and Tailwind CSS, applying intelligent component architecture for improved performance and maintainability.

EDUCATION

University of Wisconsin-Madison — Madison, WI

05/2025

Double Major: B.S. in Computer Science; B.S. in Data Science; Minor: Asian American Studies

- GPA: 3.571
- Relevant Coursework: Building User Interfaces, Data Structures & Algorithms, Operating Systems, Big Data Systems, Intro to Artificial Intelligence & Neural Networks

TECHNICAL SKILLS/TECHNOLOGIES

Languages & Frameworks

TypeScript, Python, React.js, Next.js, React Native, SQL, PostgreSQL, JavaScript, Tailwind CSS, REST APIs, Java, Expo Go, C, R

Tools

Git, GitHub, Supabase, Vercel, Playwright, Figma, Claude, Claude Code

PROJECTS

Houelle

06/2026 – Present

Next.js 16, TypeScript, Supabase (Postgres, RLS, Realtime), Resend, Vercel, Claude Code

- Architected and shipped houelle.com, a full-stack event coordination app (scheduling, location voting, itineraries, attendance, live chat) on Next.js 16, TypeScript, and Supabase with Google/Microsoft/email auth.
- Designed a local-first sync architecture (synchronous localStorage reads, optimistic Postgres writes, Supabase Realtime merges); enforced host-only permissions with row-level security across 12 versioned migrations.
- Integrated third-party APIs (Resend email API, Google/Microsoft OAuth) to build idempotent email/reminder pipelines on Vercel cron, and accelerated delivery with Claude Code via a detailed CLAUDE.md spec and a custom E2E verification skill.

Portfolio Page

03/2026 – 04/2026

Next.js, TypeScript, Tailwind CSS, GSAP, Vercel

- Integrated the Spotify Web API via an OAuth 2.0 authentication pipeline to display currently playing or recently played tracks in real time.
- Built a personal portfolio with immersive scroll-triggered animations using GSAP ScrollTrigger and Next.js App Router, deployed on Vercel.
- Developed reusable, type-safe UI components in TypeScript and Tailwind CSS for a responsive layout across desktop and mobile.
